

**IN THE CLAIMS:**

Please AMEND claims 1, 3, 9, 17, 19, 22, 30, 32-36, 38-40, and 42-48; and

Please ADD claims 51-52 as shown below.

1. (Currently Amended) A ~~method of communicating information, said method comprising:~~

communicating information;

comparing a current item list containing a plurality of current items with a reference item list containing a plurality of reference items;

determining a type of classification based on said comparing of the items of the lists; and

using the determined type of classification to control ~~how the~~ communicating the information ~~is communicated.~~

2. (Original) The method of claim 1, wherein said comparing determines a difference between said current item list and said reference item list.

3. (Currently Amended) The method of claim 2, wherein the communicating information further comprising comprises sending information regarding said difference from a first entity to a second entity.

4. (Original) The method of claim 3, further comprising encoding said information regarding said difference prior to sending said information from said first entity to said second entity.

5. (Original) The method of claim 4, wherein encoding said information comprises encoding information regarding a position of a newly added item to said reference item list.

6. (Original) The method of claim 4, wherein encoding said information comprises encoding information regarding which item in said reference item list is not in said current item list.

7. (Original) The method of claim 4, wherein encoding said information comprises encoding information regarding content of at least one item in said reference item list.

8. (Original) The method of claim 4, wherein encoding said information comprises a combination of at least two of the following: (a) encoding information regarding a position of a newly added item to said reference item list; (b) encoding information regarding which item in said reference item list is not in said current item

list; and (c) encoding information regarding content of at least one item in said reference item list.

9. (Currently Amended) The method of claim 1, wherein the communicating information further ~~comprising~~ comprises sending a compressed list from a first entity to a second entity.

10. (Original) The method of claim 9, wherein said compressed list includes information regarding a difference between said current item list and said reference item list.

11. (Original) The method of claim 10, wherein said difference is encoded within said compressed list based on said determined type of classification.

12. (Original) The method of claim 11, wherein said information further comprises a type of encoding.

13. (Previously Presented) The method of claim 12, wherein said type of encoding comprises one of: an insertion encoding scheme, a removal encoding scheme and a content change encoding scheme.

14. (Original) The method of claim 1, further comprising sending information regarding a difference between an item in said current item list and a corresponding item in said reference item list.

15. (Original) The method of claim 1, wherein said type of classification is based on at least one of: whether an item in said reference item list is in said current item list, whether said item is in said reference item list and whether contents of said item in said current item list are the same as contents of said item in said reference item list.

16. (Original) The method of claim 1, further comprising decompressing information sent from a first entity to a second entity.

17. (Currently Amended) The method of claim 1, wherein the communicating further comprising ~~comprising~~ comprises sending said reference item list from a first entity to a second entity.

18. (Original) The method of claim 17, further comprising decompressing information sent from said first entity to said second entity using said previously sent reference item list as a reference.

19. (Currently Amended) A method, ~~of communicating~~ comprising:

classifying at least one item of a current list containing a plurality of items by  
comparing the current list with a reference list containing a plurality of items;

based upon the classifying of the at least one item of the current list, forming a  
compressed list including said at least one item;

transmitting said compressed list; and

determining a type of classification based on said comparing.

20. (Cancelled)

21. (Previously Presented) The method of claim 19, wherein said comparing  
determines a difference between said current item list and said reference item list.

22. (Currently Amended) The method of claim 21, wherein the transmitting  
the compressed list further comprising comprises transmitting information regarding said  
difference from a first entity to a second entity.

23. (Original) The method of claim 22, further comprising encoding said  
information regarding said difference within said compressed list.

24. (Original) The method of claim 19, wherein said compressed list includes  
information regarding a difference between a current item list and a reference item list.

25. (Original) The method of claim 24, further comprising encoding said information regarding said difference within said compressed list based on said classifying.

26. (Original) The method of claim 25, wherein encoding said information comprises encoding information regarding a position of a newly added item to said reference item list.

27. (Original) The method of claim 25, wherein encoding said information comprises encoding information regarding which item in said reference item list is not in said current item list.

28. (Original) The method of claim 25, wherein encoding said information comprises information regarding content of at least one item in said reference item list.

29. (Original) The method of claim 25, wherein said information comprises a type of encoding.

30. (Currently Amended) The method of claim 19, wherein the sending the compressed list further comprising comprises sending said reference item list from a first entity to a second entity.

31. (Previously Presented) The method of claim 30, further comprising decompressing information transmitted from said first entity to said second entity using said previously sent reference item list as a reference.

32. (Currently Amended) A device ~~for communicating compressed information, said device comprising:~~

a processor ~~for comparing~~configured to compare a current item list containing a plurality of current items with a reference item list containing a plurality of reference items, ~~and for determining~~to determine a type of classification based on said comparing of the items of the lists, ~~and communicating~~to communicate the compressed information based upon the determined type of classification.

33. (Currently Amended) The device of claim 32, wherein said processor ~~determines~~is configured to determine a difference between said current item list and said reference item list.

34. (Currently Amended) The device of claim 33, further comprising a transmitter ~~for transmitting~~ configured to transmit information regarding said difference from said device to another entity.

35. (Currently Amended) The device of claim 34, further comprising an encoder ~~for encoding~~ configured to encode said information regarding said difference prior to transmitting said information from said device to said another entity.

36. (Currently Amended) The device of claim 32, further comprising a transmitter ~~for transmitting~~ configured to transmit a compressed list from said device to another entity.

37. (Original) The device of claim 36, wherein said compressed list includes information regarding a difference between said current item list and said reference item list.

38. (Currently Amended) The device of claim 37, further comprising an encoder ~~for encoding~~ configured to encode said difference within said compressed list based on said determined type of classification.

39. (Currently Amended) The device of claim 32, wherein said processor device ~~determines~~ is configured to determine a difference between an item in said current item list and a corresponding item in said reference item list, and said device further comprises a transmitter ~~for transmitting~~ configured to transmit information regarding said difference from said device to another entity.

40. (Currently Amended) A device ~~for communicating information~~, said device comprising:

a processor ~~for classifying~~ configured to classify at least one item of a current list containing a plurality of items by comparing the current list with a reference list containing a plurality of items and based upon the classifying of the at least one item of the current list ~~to forming~~ a compressed list including said at least one item; and

a transmitter ~~for transmitting~~ configured to transmit said compressed list, wherein said processor ~~determines~~ is configured to determine a type of classification based on said comparing.

41. (Cancelled)

42. (Currently Amended) The device of claim 40, wherein said processor ~~determines~~ is configured to determine a difference between said current item list and said reference item list.

43. (Currently Amended) The device of claim 42, wherein said transmitter ~~transmits~~ is configured to transmit information regarding said difference between said current item list and said reference item list from said device to another entity.

44. (Currently Amended) The device of claim 43, further comprising an encoder ~~for encoding~~ configured to encode said information regarding said difference within said compressed list.

45. (Currently Amended) The device of claim 44, wherein said encoder ~~encodes~~ is configured to encode information regarding a position of a newly added item to said reference item list.

46. (Currently Amended) The device of claim 44, wherein said encoder ~~encodes~~ is configured to encode information regarding which item in said reference item list is not in said current item list.

47. (Currently Amended) The device of claim 44, wherein said encoder ~~encodes~~ is configured to encode information regarding content of at least one item in said reference item list.

48. (Currently Amended) The device of claim 44, wherein said encoder ~~performs~~ is configured to perform a combination of at least two of the following: (a) encoding information regarding a position of a newly added item to said reference item list; (b) encoding information regarding which item in said reference item list is not in said current item list; and (c) encoding information regarding content of at least one item in said reference item list.

49. (Previously Presented) The device of claim 40, wherein said compressed list includes information regarding a difference between a current item list and a reference item list.

50. (Previously Presented) The device of claim 49, wherein said difference is encoded within said compressed list based on said classifying.

51. (New) A device, comprising:  
comparing means for comparing a current item list containing a plurality of current items with a reference item list containing a plurality of reference items;  
determining means for determining a type of classification based on a comparing of the items of the lists; and  
communicating means for communicating the compressed information based upon a determined type of classification.

52. (New) A device, comprising:

classifying means for classifying at least one item of a current list containing a plurality of items;

comparing means for comparing the current list with a reference list containing a plurality of items;

forming means for, based upon the classifying of the at least one item of the current list, forming a compressed list including the at least one item; and

means for transmitting said compressed list;

wherein said classifying means is configured to classify based on a comparing of the current list with the reference list.
